1 Fundamentals of Electrical Engineering and Information Technology

Module name Introductionary Project					
Module Nr. 18-de-1010	**Credit Points** 2 CP	**Workload** 60 h	**Self study** 30 h	**Duration** 1	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr.-Ing. Harald Klingbeil		

1	**Content** Based on a complex technical problem students will get to know an idea of the diversity of electrical and information enginering. The introductionary project gives a perspective of the upcoming course of studies. It gives an introduction in engineering thinking and working. Groups of students will work in teams for one complete week. Each group of students will be accompanied by a team- and a technical tutor.
2	**Learning objectives / Learning Outcomes** Students get to know problem analysis, information acquisition, team work, project management, and presentation of results.
3	**Recommended prerequisite for participation**
4	**Form of examination** Module Final Examination: • Module Examination (Study Achievement, Oral Examination, Duration: 15 min, Pass/Fail Grading System)
5	**Grading** Module Final Examination: • Module Examination (Study Achievement, Oral Examination, Weighting: 100 %)
6	**Usability of this module** BSc ETiT, BSc MEC, BSc iST
7	**Grade bonus compliant to §25 (2)**
8	**References** lecture notes (will be handed out)

Courses

	Course Nr. 18-de-1010-pj	**Course name** Introductionary Project (Project Week)		
	Instructor Prof. Dr.-Ing. Harald Klingbeil, M. A. Stephanie Bockshorn, Dipl.-Soz. Goran Beil		**Type** Project	**SWS** 2

Module name Electrical Engineering and Information Technology I					
Module Nr. 18-hs-1070	**Credit Points** 7 CP	**Workload** 210 h	**Self study** 135 h	**Duration** 1	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr.-Ing. Jutta Hanson		

1 Content

Units and Equations: Unit systems, equation writing.
Basic definitions: Charge, current, voltage, resistance, energy and power.
Currents and voltages in electrical circuits: Ohmic law, node and mesh equations, parallel and series connections, current and voltage measurement, linear and nonlinear elements, superposition method, star-delta-transformation, node and mesh analysis in linear circuits, controlled sources.
AC systems: Time-dependent currents and voltages, steady-state mode sinusoidal currents and voltages in linear RLC-circuits, phasor diagrams, resonances in RLC circuits, AC power, locus diagrams, two-port networks, transformer, polyphase systems.

2 Learning objectives / Learning Outcomes

Students will be able after visiting this lecture
* to utilize the basic equations in electrical engineering,
* to determine the currents and voltages in linear and nonlinear circuits,
* to analyze DC and AC systems,
* to calculate simple filter and resonant circuits,
* to apply the complex calculation in electrical AC systems.

3 Recommended prerequisite for participation

4 Form of examination

Module Final Examination:
- Module Examination (Technical Examination, Written Examination, Duration: 90 min, Standard Grading System)

5 Grading

Module Final Examination:
- Module Examination (Technical Examination, Written Examination, Weighting: 100 %)

6 Usability of this module

BSc. ETiT, BSc iST, BSc MEC, BSc. Wi-ETiT, BSc CE, LA Physik/Mathematik

7 Grade bonus compliant to §25 (2)

Courses

Course Nr. 18-hs-1070-vl	**Course name** Electrical Engineering and Information Technology I		
Instructor Prof. Dr.-Ing. Jutta Hanson		**Type** Lecture	**SWS** 3

Course Nr. 18-hs-1070-ue	**Course name** Electrical Engineering and Information Technology I		
Instructor Prof. Dr.-Ing. Jutta Hanson		**Type** Practice	**SWS** 2

Module name Electrical Engineering and Information Technology Lab I					
Module Nr. 18-kn-1040	**Credit Points** 4 CP	**Workload** 120 h	**Self study** 60 h	**Duration** 2	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr. Mario Kupnik		

1 Content

After a safety instruction for electrical equipment, students dolab experiments covering foundations of electrical engineering by using theoretical and experimental instructions to improve basic electrical understanding. Building up a test set autonomously and performing of measurements and evaluations in the form of logs to confirm the theoretical knowledge and lead to independent work in practice.
The following experiments are performed:

- Investigate real behavior of ohmic resistors
- Investigate real behavior of capacitors and inductors
- Calculate impedances of basic two-terminal circuits using network theory
- Measure of electrical power in AC circuits and investigate in the real behaviour of transformers
- DC technology, capacity and inductors, AC technology - Impedances and two-terminal circuits, transformer & power;

2 Learning objectives / Learning Outcomes

After preparing the afternoons independently and self-implementing the measurement setup and measurement tasks by active participation in the practical group and by thorough preparation of the associated measurement protocols, you should be able to:

- Perform the measurement of basic electrical parameters of DC and AC circuits, independently and in compliance with safety rules
- measuring the frequency response of passive electrical networks and resonant circuits, and electric power measurement
- the measurement of circuits for the determination of magnetic, electro-thermal and high-frequency. You have to be able to build and run your own measurements
- interpretations of the measurement results in terms of its technical meaning, but also their accuracy and error sources safely.

3 Recommended prerequisite for participation

Parallel attending the lectures and exercises, “Electrical Engineering I and II”

4 Form of examination

Module Final Examination:

- Module Examination (Study Achievement, Optional, Standard Grading System)

5 Grading

Module Final Examination:

- Module Examination (Study Achievement, Optional, Weighting: 100 %)

6 Usability of this module

BSc ETiT

7 Grade bonus compliant to §25 (2)

Module name Electrical Engineering and Information Technology II					
Module Nr. 18-gt-1020	**Credit Points** 7 CP	**Workload** 210 h	**Self study** 135 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1	**Content** Electrostatic fields; stationary electrical flow fields; stationary magnetic fields; temporally variable magnetic fields; capacitor networks, transmission lines
2	**Learning objectives / Learning Outcomes** The students have detached themselves from the conception that all electrical procedures are line- bound; they have a clear idea of the field term, can read and interpret field plots and also design simple field plots themselves; they understand the difference between a curl and a divergence field, can describe this difference mathematically and are able to recognize the field type from a mathematical description, respectively; they are able to calculate field distributions for simple rotationally symmetric arrangements analytically; they can deal surely with the definitions of the electrostatic, the electrical quasi-static, the magnetostatic and the magneto-electric field; they have recognized the connection and dualism of electricity and magnetism; they control the mathematical apparatus necessary for their description and can apply it to simple examples; they can calculate with nonlinear magnetic circuits; they can compute inductance, capacity and resistance of simple geometrical arrangements and understand them now as physical characteristics of the respective arrangement; they have recognized, how different forms of energy can be transferred into each other and are thereby already able to solve simple scientific engineering problems; they have understood the underlying physical backgrounds for many applications of electrical engineering and are able to describe them mathematically, develop it further in a simple way and apply it to other examples; they are familiar with the system of Maxwell's equations and can transfer them from the integral into the differential form; they have a first idea of the importance of Maxwell's equations for all conceptual formulations of electrical engineering and they understand the propagation of electromagnetic waves in the free space and on transmission lines
3	**Recommended prerequisite for participation** Electrical Engineering and Information Technology I
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Duration: 120 min, Standard Grading System)
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Weighting: 100 %)
6	**Usability of this module** BSc ETiT, BSc MEC, BSc Wi-ETiT, LA Physik/Mathematik, BSc CE, BSc iST
7	**Grade bonus compliant to §25 (2)** Notenverbesserung entsprechend §25 (2) APB TU Darmstadt

3 Fundamentals of Engineering Mechanics

Module name Engineering Mechanics I (Statics)					
Module Nr. 16-64-5190	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 90 h	**Duration** 1	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr.-Ing. Martin Oberlack		

1	**Content** Definition of force, general systems of forces and equilibrium of rigid bodies, center of mass, reaction of the supports, statically determined system, trusses, beams, frames, curved beams, work principles, stability and friction.
2	**Learning objectives / Learning Outcomes** On successful completion of this module, students should be able to: • Discern and explain the concept of force, moment, and equilibrium. • Analyse statically determinate problems independently, i.e. to identify the forces, and determine their attack points and effects, and formulate equilibrium conditions. • Ascertain the support reactions in statically determinate systems by means of equilibrium conditions or the principle of virtual work. • Compute internal forces and moments in beams and trusses. • Determine the center of gravity of a given rigid body. • Determine the equilibrium positions of a given movable system and investigate their stability. • Analyse static systems including static or kinetic frictions and calculate corresponding forces.
3	**Recommended prerequisite for participation** None
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Standard Grading System) Written exam 90 min
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)
6	**Usability of this module** Bachelor MPE Pflicht Bachelor WI-MB Bachelor Mechatronik, Computational Engineering, BEd. Metalltechnik
7	**Grade bonus compliant to §25 (2)**
8	**References** Gross, Hauger, Schröder, Wall: Technische Mechanik I: Statik, 4. Auflage 2009, Springer Verlag.

Module name Engineering Mechanics II (Elastostatics)					
Module Nr. 16-61-5010	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 90 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr.-Ing. Wilfried Becker		

1	**Content** Stresses in 2D and 3D representation, deformation and strain rate, Hooke's law, strength hypotheses, bending of beams, deflection curve, shear influence, torsion, energy principles in elastostatics, stability and buckling.
2	**Learning objectives / Learning Outcomes** The students will have an understanding of the essential basics of the elasto-statics of one-dimensional continua (rods, beams, torsion shafts). They will be capable of modelling such systems mathematically, solving the corresponding mathematical equations and interpreting the solutions.
3	**Recommended prerequisite for participation** Engineering Mechanics I (Statics)
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Standard Grading System)
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Weighting: 100 %)

Module name Technical Thermodynamics I					
Module Nr. 16-14-5010	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Duration** 1	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr.-Ing. Peter Christian Stephan		

1 Content

Fundamental terms of thermodynamics; thermodynamic equilibrium and temperature; different forms of energy (internal energy, heat, work, enthalpy); properties and equations of state for gases and incompressible substances; first law of thermodynamics and energy balances for technical systems; second law of thermodynamics and entropy balances for technical systems; exergy analysis; thermodynamic behaviour during phase change; the carnot cycle for power generation or refrigeration; energy efficiency and coefficient of performance; cyclic processes for gas turbines, combustion engines, power plants, refrigerators and heat pumps.

2 Learning objectives / Learning Outcomes

On successful completion of this module, students should be able to:

- Explain the relationships between thermodynamic properties and the thermodynamic state of a system and apply them within calculations of thermal system behaviour.
- Distinguish between different types of energy (e.g. work, heat, internal energy, enthalpy) and define them.
- Analyse technical systems and processes using energy balances and equations of state.
- Assess energy conversion processes by means of an entropy balance or an exergy analysis.
- Characterise the thermal behaviour of gases, liquids and solids and corresponding phase change processes.
- Apply this basic knowledge (1.-5.) to examine machines (turbines, pumps etc.) and processes for energy conversion (combustion engine, power plants, refrigerators, heat pumps).

3 Recommended prerequisite for participation

None

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Standard Grading System)

Written exam 150 min

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)

6 Usability of this module

Bachelor MPE Pflicht
Bachelor WI-MB
Master ETiT MFT, Bachelor Mechatronik

7 Grade bonus compliant to §25 (2)

Language German			**Module owner** Prof. Dr.-Ing. Klaus Hofmann		

1 Content

Semiconductor Devices: Diode, MOSFET, Bipolar Transistor; Design of Electronic Circuits;
Analog Circuits: Basic Properties, Properties and Application of Operational Amplifiers, Circuit Simulation with SPICE, Small Signal Gain, Single Stage Amplifiers; Frequency Response;
Digital Circuits: CMOS Logic Circuits

2 Learning objectives / Learning Outcomes

A student is, after successful completion of this module, able to

- analyse Diodes, MOS- und Bipolartransistors in simple circuits
- calculate the properties of single transistor circuits, such as small signal gain, input and output resistance
- design inverting and non-inverting amplifiers from operational amplifiers and knows their ideal and non-ideal properties
- calculate the frequency behavior of simple transistor circuits
- distinguish the different methods to construct a logical gate from basic transistors and explain their fundamental properties.

3 Recommended prerequisite for participation

Basics of Electrical Engineering

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Written Examination, Duration: 90 min, Standard Grading System)

5 Grading

Module name Measuring Technique					
Module Nr. 18-kn-1011	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr. Mario Kupnik		

1 Content

The module includes theoretical discussion and practical application of the measuring chain in detail on example the electrical variables (current, voltage, impedance, power) and selected non-electrical variables (frequency, time, force, pressure and acceleration).
In the lecture the following chapter will be thematically treated measuring signals and measuring equipment (oscilloscope, laboratory testing equipment), static measurement error and disturbance variables (especially temperature), basic measurement circuits, AD conversion principles and filtering, measurement method non-electrical variables and the statistics of measurements (distributions, statist safe tests).
The topics of the lecture are discussed in the exercise of the module. Examples are analyzed and their application in measurement scenarios are practiced.
The practicum of the module consists of five experiments which are time closely matched in time to the lecture:

- Measuring of signals in the time range with digital storage oscilloscope, trigger conditions
- Measuring of signals in the frequency range with digital storage oscilloscope, error of measurement (aliasing / subsampling, leackage) and window functions
- Measuring of mechanical dimensions with suitable primary sensors, sensor electronics / amplifier circuits
- computer-based measuring
- Importing of sensor signals, whose processing and the resulting automated control of a process using a programmable logic controller (PLC)

2 Learning objectives / Learning Outcomes

The students know the structure of the measuring chain and the specific properties of the corresponding elements. They know the structure of electronic measuring instruments and basic measuring circuits for electrical and selected non-electrical variables and can apply them. They know the basics of capturing, processing, transferring and storage of measurement data and can describe error sources and quantifying their influences.
In the practicum, the students deepen the basis of the measurements with the oscilloscope, the understanding of the relationship between time and frequency range. Methodically they are able to document and evaluate the data during laboratory measuring.

3 Recommended prerequisite for participation

Basics of ETiT I-III, Math I-III, Electronic

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Written Examination, Duration: 90 min, Standard Grading System)

Module Eccompanying Examination:

1 Content

Construction and function of induction machine, synchronous machine, direct current machine. Electromagnetic field within machines, armature windings, steady-state performance as motor/generator, application as line-fed and inverter-fed drives. Significance for electric power generation, both to the grid and in stand-alone version.

2 Learning objectives / Learning Outcomes

With active collaboration during lectures by asking questions related to those parts, which have not been completely understood by you, as well as by independent solving of examples ahead of the tutorial (not as late as during preparation for examination) you should be able to:

- calculate and explain the stationary operation performance of the three basic types of electric machine sin motor and generator mode,
- understand the application of electrical machines in modern drive systems and to design simple drive applications by yourself,
- understand and explain the function and physical background of the components of electrical machines
- understand and explain the impact of basic electromagnetic field and force theory on the basic function of electrical machines.

3 Recommended prerequisite for participation

Mathematics I to III, Electrical Engineering I and II, Physics, Mechanical Engineering

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Optional, Standard Grading System)

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Optional, Weighting: 100 %)

1 Content

- Control of a 2-tank system.
- Control of pneumatic and hydraulic servo-drives.
- Control of a 3 mass oscillator.
- Position control of a MagLev system.
- Control of a discrete transport process with electro-pneumatic components.
- Microcontroller-based control of an electrically driven throttle valve.
- Identification of a 3 mass oscillator.
- Process control using PLC.

2 Learning objectives / Learning Outcomes

After this lab tutorial the students will be able to practically apply the modelling and design techniques for different dynamic systems presented in the lecture ”System dynamics and control systems I” to real lab experiments and to bring them into operation at the lap setup.

5.1 Optional Catalog ETiT: Electrical Engineering and Information Technology

Module name Electrical Power Engineering					
Module Nr. 18-bi-1010	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr. techn. Dr.h.c. Andreas Binder		
1	**Content** The lecture gives an introduction to the technical processes for the use of energy for the human civilization in general and to the basic tasks and challenges of the electrical energy in particular. Biochemical energy processes such as the human metabolism are therefore not subject of the course. First, the physical basics of the term “energy” are repeated and the different forms of energy (mechanical, thermal, electromagnetic, chemical and nuclear) are explained in terms of the technical use of energy as heat, mechanical movement and electricity. Then, an overview of the energy resources is given, starting from the solar radiation and its direct and indirect impact, such as the solar heat and the motion of air mass, surface water and sea waves. Next, the energy source of biomass due to solar radiation and the fossil energy sources oil, natural gas and coal will be discussed. The energy sources of nuclear fission (uranium deposits) and nuclear fusion (heavy water), and geothermal energy due to nuclear effects in the Earth’s interior are explained as well as the tidal effects caused by planetary motion. The increasing energy demand of the rapidly growing world population and the geographic distribution of energy sources (deposits, acreage, solar radiation, wind maps, tidal currents, ...) are described. The resulting energy flows on transport routes such as pipelines, waterways, ..., are briefly presented. In another section, energy conversion processes (direct and indirect methods) are illustrated. Large-scale processes such as thermal cycles or hydraulic processes in power plants are discussed mainly, but also marginal processes such as thermionic converters are addressed. Afterwards, a specialization takes place on the subject of electric power supply with respect to the increasing proportion of the electric power applications. The chain from the electric generator to the consumer with an overview of the required resources, the hiring electrical load flow and its stability is addressed. The storage of energy and in particular of electrical energy by converting into other forms of energy will be discussed. Finally, questions for the contemporary use of energy resources in regard to sustainability are mentioned.				
2	**Learning objectives / Learning Outcomes** Students know the physically based energy basics and have an overview of the energy resources of our planet Earth. They understand the fundamental energy conversion processes on the technical use of energy in the form of heat as well as mechanical and electrical work. They have acquired basic knowledge of electrical engineering in the chain of effects from electric power producer to the consumer and are able to educate themselves about current issues of energy use and its future development. They are able to perform basic calculations for energy content, energy conversion, efficiencies, storage, and for conversion and transportation losses. They are prepared for advanced lectures on energy components and systems, energy industry, and on future forms of energy supply.				
3	**Recommended prerequisite for participation** Basic knowledge of physics (mechanics, thermodynamics, electrical engineering, structure of matter) and chemistry (binding energy) are desirable and facilitate understanding of the energetic processes.				

4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Duration: 120 min, Standard Grading System)
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Weighting: 100 %)
6	**Usability of this module** BSc ETiT, BSc WI-ETiT, BSc MEC, BSc iST, BSc CE, MSc ESE
7	**Grade bonus compliant to §25 (2)** At the beginning of the semester, it will be announced whether there will be homework tests accompanying the lecture that will enable an improvement in grades.

Module name Introduction to Electrodynamics					
Module Nr. 18-dg-1010	**Credit Points** 5 CP	**Workload** 150 h	**Self study** 90 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr.-Ing. Herbert De Gersem		

1	**Content** Vector calculus, orthogonal coordinate systems, Maxwell's equations, interface and boundary conditions, layered media, electrostatics, scalar potential, Coulomb integral, separation of variables, method of image charges, magnetostatics, vector potential, Biot-Savart law, stationary current fields, fields in matter, energy flow, skin effect, plane waves, polarization, TEM waves, reflection and multi-layer problems, multi conductor transmission lines (capacitance, inductance, and conductance matrix), velocity definitions, basics of rectangular waveguides.
2	**Learning objectives / Learning Outcomes** Students will be familiar with Maxwell's equations in integral and differential form for static and dynamic field problems. They will have a mental picture of wave phenomena in free space. They are able to recognice and interpret wave effects in the different areas of electrical engineering. They are able to derive the wave effects from Maxwell's equations and have a good understanding of the necessary mathematical tools.
3	**Recommended prerequisite for participation** Lecture notes. Further literature recommendations are given in the course.
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Duration: 180 min, Standard Grading System)
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Weighting: 100 %)
6	**Usability of this module** BSc ETiT, BSc Wi-ETiT
7	**Grade bonus compliant to §25 (2)** Improvement by up to 0.4 due to bonus points which can be acquired by means of e-learning online tests.
8	**References** Lecture notes. Further literature recommendations are given in the course.

	Instructor Prof. Dr.-Ing. Herbert De Gersem		**Type** Practice	**SWS** 2

Module name Fundamentals of Signal Processing					
Module Nr. 18-zo-1030	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr.-Ing. Abdelhak Zoubir		

1	**Content** The course covers the following topics: • The basic concepts of stochastic • The sampling theorem • Discrete-time noise processes and their properties • Description of noise processes in the frequency domain • Linear time-invariant systems: FIR and IIR filters • Filtering of noise processes: AR, MA, and ARMA models • The Matched filter • The Wiener filter • Properties of estimators • The method of least squares
2	**Learning objectives / Learning Outcomes** The course covers basic concepts of signal processing, and illustrates them with practical examples. It serves as an introductory course for advanced lectures in digital signal processing, adaptive filtering, communications, and control theory.
3	**Recommended prerequisite for participation**
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written/Oral Examination, Duration: 120 min, Standard Grading System) In general, the examination takes place in form of a written exam (duration: 120 minutes). If up to 10 students register in semesters in which the lecture does not take place, there will will be an oral examination (duration: 30 min.). The type of examination will be announced within one working week after the end of the examination registration phase.
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written/Oral Examination, Weighting: 100 %)
6	**Usability of this module** BSc ETiT, BSc MEC
7	**Grade bonus compliant to §25 (2)**
8	**References**

Language German			**Module owner** Prof. Dr.-Ing. Anja Klein		

1 Content

Signals and Communication Systems, Base-band Communications, Detection of Base-band Signals in AWGN Channels, Bandpass-Signals und -Systems, Linear Digital Modulation Schemes, Digital Modulation und Detection, Multi-carier Transmission, OFDM, Spread-Spectrum Techniques, CDMA, Multiple Access

2 Learning objectives / Learning Outcomes

After completion of the lecture, students possess the ability to:

- classify signals and communication systems,
- understand, model and analyse basic components of communication systems,
- understand, evaluate and compare communication systems for transmission over additive white Gaussian noise channels,
- model and analyse base-band commnication systems,
- describe and analyse bandpass signals and bandpass communication systems in the equivalent base-band,
- understand, model, evaluate, compare and apply linear modulation schemes,
- design receiver structures for different modulation schemes,
- detect linear modulated data after transmission over additive white Gaussian noise channels in an optimum way,
- understand and model OFDM,
- understand and model CDMA,
- understand and compare the basic properties of multiple access schemes.

3 Recommended prerequisite for participation

Electrical Engineering I and II, Deterministische Signale und Systeme, Mathematics I to IV

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Written Examination, Duration: 90 min, Standard Grading System)

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Written Examination, Weighting: 100 %)

6 Usability of this module

BSc ETiT, BSc Wi-ETiT, BSc CE, MSc iST, BSc MEC

7 Grade bonus compliant to §25 (2)

Language German			**Module owner** Prof. Dr.-Ing. Gerd Griepentrog		

1 Content

Power electronic devices convert the energy from the distribution network to the form required by the load. This conversion does not wear out, can be controlled very fast and has a high efficiency. In lecture "Power Electronics" the most important circuits required for the energy conversion are treated, using ideal switches.
The main chapters are
I.) Line commutated converters in order to understand the basic concepts of power electronic systems.
II.) Self- commutated converters (one, two and four quadrant converters, 3-phase- VSI)

2 Learning objectives / Learning Outcomes

After an active participation in the lecture, as well as by solving all exercises prior to the respective tutorial students should be able to:

- Understand the ideal concept of power semiconductors
- Calculate and sketch the time-characteristics of all currents and voltages in a line-commutated converter using defined simplifications as well as represent the behavior of currents and voltages during commutation in line-commutated converters for center –tapped as well as for bridge circuits.
- Specify the basic circuit diagrams for one, two and four quadrant DC/DC converters and calculate the characteristics of voltages and currents in these circuits.
- Explain the function of single-phase and three-phase voltage source inverters and calculate the currents and voltages in these circuits using defined simplifications.
- Understannd the concept und operation of HVDC converter

3 Recommended prerequisite for participation

Mathe I und II, ETiT I und II, Energietechnik

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Written Examination, Duration: 90 min, Standard Grading System)

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Written Examination, Weighting: 100 %)

6 Usability of this module

MSc ETiT, MSc MEC, Wi-ETiT

7 Grade bonus compliant to §25 (2)

Language German			**Module owner** Prof. Dr.-Ing. Rolf Jakoby		

1	**Content** Part 1: Chap. 1 will be a brief introduction in "Electrical Information- and Communication Engineering", presenting signals as carrier of information, classifying electrical signals and describing elements of communication systems. Then, Chap. 2 introduces various line-conducted and wireless transmission media, power budget calculations for both media types, basics of antenna radiation and parameters etc., which will be emphasized by application examples like TV-satellite reception and mobile communication channels. Part 2: Chap. 3 is focused on signal distortions and interferences, especially thermal noise, considering noisy two-port devices and its concatenations, lossy networks, antenna noise temperature and the impact of noise on analog and digital signals. This chap. ends with basics of information theory and channel capacity for AWGN-channels. In contrast, chap 4 deals with noise-reduction and distortion-compensation methods. Part 3: Chap. 5 introduces sampling of band-limited signals and analog modulation of a pulse carrier (pulse-amplitude- pulse-duration- and pulse-angle-modulation), which will be extended on digital modulation in the baseband by means of pulse-code modulation (PCM), focusing on signal quantizing, analog-digital conversion, minimum bandwidth, bit error rate and error probability of a PCM word. At least, PCM-time-division multiplex and –systems will be discussed. Part 4: Chap. 7 deals with fundamentals of multiplex- and RF-modulation schemes as well as with frequency conversion, frequency multiplication and mixing strategies. Then, receiver principles and image frequency problems of heterodyne-receivers as well as amplitude modulation of a sinus carrier will close this chapter. Chap. 8 introduces digital modulation of a harmonic carrier, including band-limited inter-symbol interference-free transmission, matched filtering and binary shift keying of a sinusoidal carrier in amplitude (ASK), phase (PSK) or frequency (FSK). From this follows higher-order modulation schemes like M-PSK or M-QAM. A brief outlook on the functionality of channel coding and interleaving in chap. 9 will end up the lecture.
2	**Learning objectives / Learning Outcomes** Aim of the Lecture: To teach the fundamentals of communications (physical layer), primarily the transmission of signals from a source to a sink, possible modulation and access methods as well as signal distortion and noise. The introduction of communications is a basement for further lectures like Communication Technology, Laboratories of Communication Technology (NTP A, B), Microwave Eng., Optical Communications, Mobile Communications and Terrestrial and satellite-based radio systems.
3	**Recommended prerequisite for participation** Deterministic Signals and Systems
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Duration: 120 min, Standard Grading System)
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Weighting: 100 %)
6	**Usability of this module** BSc ETiT, Wi-ETiT
7	**Grade bonus compliant to §25 (2)**

1	**Content** Types of instruction sets, memory organization and its impact on the runtime, pipelining, instruction level parallelism, superscalar processors, VLIW processors, floating point numbers and operations, memory subsystem, cache types, virtual address spaces, benchmarking and performance prediction, system architecture and bus systems, peripheral devices
2	**Learning objectives / Learning Outcomes** Successful students can analyze and evaluate processors, memory systems and bus systems. They can transform structures of high-level programming languages like subroutine calls into sequences of machine instructions. They are able to measure the performance of computers. They know how instructions are executed in modern processors and thus, they can predict the influence of a specific memory hierarchy onto the execution time of a given program. They know how internal and external bus systems work and can define the essential parameters for their dimension and operation.
3	**Recommended prerequisite for participation** Basic knowledge of digital design as it can be obtained by the lecture “Logic Design”.
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Duration: 90 min, Standard Grading System)
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Written Examination, Weighting: 100 %)

1 Content

During the mechatronic workshop students get the possibility to design and construct their own fixture, which contains a ball track and a ball elevator mechanism. Herefore dimensional plans have to be understood correctly. Afterwards all components (i.e. circuit board, rails and holders) have to be designed and manufactured within the electronic lab and the workshop, where students work independently with turning, drilling and milling machines.
The mechatronic workshop allows students to gain practical experience and knowledge in contruction, assembling and PCB layout design.

2 Learning objectives / Learning Outcomes

Understanding of construction plans, circuit layout design, practical experience with turning, drilling and milling machines.

3 Recommended prerequisite for participation

You have to bring your **own printed** copy of the script. This is mandatory for attending the course. The script will be published on the moodle platform.

4 Form of examination

Module Final Examination:

- Module Examination (Study Achievement, Optional, Standard Grading System)

5 Grading

Module Final Examination:

- Module Examination (Study Achievement, Optional, Weighting: 100 %)

6 Usability of this module

BSc/MSc ETiT, BSc/MSc MEC

7 Grade bonus compliant to §25 (2)

1 Content

The content of this course is the following:

- Circuit interpretation as directed graphs
- Modified nodal and loop analysis
- Flux and charge oriented formulations
- Differential algebraic equations
- Linear system solver
- Numerical solution of nonlinear systems
- Time-domain methods
- Frequency-domain solution
- Implementation of the numerical methods

2 Learning objectives / Learning Outcomes

Students understand the theoretical and numerical fundamentals of circuit simulation and how the equations can be derived from Maxwell's equations. Circuit properties can be expressed in tems of graph theory. The sparse systems of equations such as the flux/charge oreinted modified nodal analysis can be assembled. In order to solve the obtained systems, different numerical methods for the simulation of circuits are relevant. This includes methods for the solution of linear systems (direct and iterative solvers), root-finding algorithms for nonlinear systems and implicit time integration methods. Mathematical concepts such as stability, convergence order or complexity are known and can be employed to judge the advantages and disadvantages of the various methods. Eventually, the students are able to programm their own circuit simulator, that can return both frequency as well as time domain solutions of electric networks.

3 Recommended prerequisite for participation

1 Content

Application of the conservation equations to engineering fluid systems; Transmission behavior; Linearization; Resilience; Compressibilty; Effective speed of sound; Two phase flows; Flexible pipes; Pneumatic spring; Pressure reservoir; Resistance laws; Darcy medium; Porosity; Sorption processes; Bingham medium; Stability of suspensions; Electro- and magneto-rheological fluids; Visco-elastic fluids; Hydraulic pistons; Inertia losses; Friction losses; Efficiency; Transient flows; Hydraulic bearings; Virtual/Added masses; Method of characteristics; Resonance charging of combustion engines; Shock losses; Dimensional analysis; Fluid energy machines; Characteristic curve; Operating point; Instabilities; Acoustics

2 Learning objectives / Learning Outcomes

On successful completion of this module, students should be able to:

- Assess pneumatic as well as hydraulic fluid systems.
- Describe the flow through valves, filters and seals.
- Use the Cordier diagram in oder to select the most energy efficient fluid flow machine.
- Describe the dynamic behaviour of fluid systems.
- Describe the essential losses and operation limits of fluid flow machines.
- Characterize non-Newtonian materials in its temperature behaviour.
- Describe compressible, unsteady flows by the aid of the linear method of characteristics.

3 Recommended prerequisite for participation

fundamental fluid mechanics recommended

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Standard Grading System)

Written exam 90 min or oral exam 30 min

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)

6 Usability of this module

WP Bachelor MPE

7 Grade bonus compliant to §25 (2)

Courses

Course Nr. 16-10-5100-vl	**Course name** Fundamentals of Turbomachinery and Fluid Systems	
Instructor	**Type** Lecture	**SWS** 4

	Course Nr.	Course name		
	16-10-5100-ue	Fundamentals of Turbomachinery and Fluid Systems		
	Instructor		**Type**	**SWS**
			Practice	1

Module name Motor Vehicles					
Module Nr. 16-27-5010	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 105 h	**Duration** 1	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr. rer. nat. Hermann Winner		

1	**Content** Layout and function of vehicle components (engine, transmission, drivetrain, tires); driving performance; steering and steering systems; brakes and brake systems; springs and shock absorbers; axle construction.
2	**Learning objectives / Learning Outcomes** On successful completion of this module, students should be able to: • List the influencing factors on a vehicle's fuel consumption and estimate the fuel consumption. • Name measures on vehicle design which lead to a reduction of consumption and can indicate driver operation characteristics which contribute to minimising fuel consumption. • Explain and evaluate the main requirements, function principles, and the basic constitution of components like tires, power train, brakes and steering. • List different types of spring-damper-systems and explain their basic construction. • Explain the functionality and discuss the main properties of diverse axle-concepts.
3	**Recommended prerequisite for participation** Basic knowledge of technical mechanics (force diagram, equations of motion) and basic knowledge of thermodynamics
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Optional, Standard Grading System) Written exam 90 min or oral exam 45 min
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Optional, Weighting: 100 %)
6	**Usability of this module** WP Bachelor MPE Bachelor Mechatronik MSc. Informatik (Anwendungsfach Fahrzeugtechnik, Spezialisierung)
7	**Grade bonus compliant to §25 (2)**
8	**References** manuscript, CD-ROM (can be purchased at the department's office), internet download

Module name Fundamental Fluid Mechanics					
Module Nr. 16-11-5010	**Credit Points** 6 CP	**Workload** 180 h	**Self study** 120 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr.-Ing. Jeanette Hussong		

1	**Content** Properties of fluids, flow kinematics, conservation equations, constitutive equations, equations of motion, Navier-Stokes equations, hydrostatics, exact solutions, turbulent flows, stream filament theory, flow around bodies.
2	**Learning objectives / Learning Outcomes** On successful completion of this module, students should be able to: • Explain the origins and limitations of the basic conservation equations of fluid mechanics (mass, momentum, moment of momentum, energy). • Choose the correct equations, simplifications, and boundary conditions for a given application and recognise avenues for solution. • Use stream filament theory and loss coefficients to compute flow networks. These capabilities are developed for incompressible, single phase flows.
3	**Recommended prerequisite for participation** knowledge of ordinary and partial differential equations
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Standard Grading System) Written exam 2x 150 min
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)
6	**Usability of this module** Bachelor MPE Pflicht Master ETiT AUT; Bachelor Mechatronik
7	**Grade bonus compliant to §25 (2)**
8	**References** Spurk: Strömungslehre, Springer Verlag. Spurk: Aufgaben zur Strömungslehre, Springer Verlag.

Module name Technical Thermodynamics II					
Module Nr. 16-14-5020	**Credit Points** 2 CP	**Workload** 60 h	**Self study** 15 h	**Duration** 1	**Cycle offered** SoSe
Language German			**Module owner** Prof. Dr.-Ing. Peter Christian Stephan		

1 Content

Properties of ideal gas mixtures and mixing processes; moist air and air-conditioning processes; thermodynamic analysis of complete and incomplete combustion processes including air demand; exhaust gas composition, caloric value, and energy balances.

2 Learning objectives / Learning Outcomes

On successful completion of this module, students should be able to:

- Transfer his knowledge from Technical Thermodynamics I on pure gases to gas mixtures and analyse corresponding processes.
- Describe all states of moist air with all forms of aggregate states.
- Calculate the change of state of moist air in air-conditioning processes.
- Set up the main reactions equations for combustion processes and derive from them the air demand and exhaust gas composition for different fuels.
- Set up the energy balance for combustion processes and calculate the generated heat transfer.

3 Recommended prerequisite for participation

Technical Thermodynamics I recommended

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Standard Grading System)

Written exam 90 min

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)

6 Usability of this module

Bachelor MPE Pflicht
Bachelor Mechatronik

7 Grade bonus compliant to §25 (2)

1	**Content** Manufacturing of components by forming and machining, erosion and welding, as well as machining in general.
2	**Learning objectives / Learning Outcomes** On successful completion of this module, students should be able to: • List all industrial production techniques in the metal and plastics manufacturing area. • Follow through with a systematic comparison of alternative production methods. • Optimize the production of industrially manufactured products, i.e. to develop alternative manufactured process chains. • Form products appropriate for manufacturing and assembly.
3	**Recommended prerequisite for participation** None
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Standard Grading System) Written exam 2 h
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)
6	**Usability of this module** Bachelor MPE Pflicht
7	**Grade bonus compliant to §25 (2)**
8	**References** Lecture notes are available during the course.

1 Content

Introduction: Historic review, economic and ecological aspects, classification of engines.
Fundamentals of the thermodynamic process: Carnot cycle, constant-volume cycle, constant-pressure cycle, Seiliger cycle.
Fundamentals of engine construction: Crank shaft, con-rod, bearing, piston, piston rings, piston pin, liner, cylinder head gasket, cylinder head, charge cycle.
Parameters: Mean pressure, power, torque, fuel consumption, efficiency, cylinder charge, air fuel ratio, kinematics of the crank mechanism, compression ratio, characteristic diagrams, main dimensions.
Fuel: Chemical configuration, characteristics, heat value, characteristics of ignition, production, alternative fuels.
Basics of carburation: Spark-ignition engines, diesel engines, spreading, conditioning.
Carburation of spark-ignition engines: Carburator, electronic fuel injection, HCCI (Homogeneous Charge Compression Ignition).
Ignition of spark-ignition engines: Requirements, spark plug, ignition systems, magnetic systems, knock control systems.Mixture formation of diesel engines: basics, classification of different methods, mixture distribution and mixture formation, injection systems

2 Learning objectives / Learning Outcomes

On successful completion of this module, students should be able to:

- Explain the principles and the construction of combustion engines (ranging from small two-stroke models to the marine diesel engine).
- Explain the physical principles of combustion engines.
- Develop the essential parameters and apply these to characterise engines.
- Explain the economic and ecological relevance of combustion engines.
- Apply the thermodynamic basics of combustion engines to develop new drive concepts.
- Describe the basics of the engine construction.
- Analyse and evaluate the interdependency of fuel, mixture formation, and combustion.
- Explain the difference by mixture formation and ignition process of spark ignited engines and diesel engines.
- Explain the ignition and ignition systems of the spark ignited engine.

3 Recommended prerequisite for participation

None

4 Form of examination

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Standard Grading System)

Written or oral exam (optional) [written: 1 h 30 min; oral: 1 h 30 min (per group with 4 people]

5 Grading

Module Final Examination:

- Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)

6 Usability of this module

WP Bachelor MPE
Bachelor Mechatronik

7 Grade bonus compliant to §25 (2)

Courses

Course Nr. 16-03-5010-vl	**Course name** Combustion Engines I		
Instructor		**Type** Lecture	**SWS** 3

Module name Machine Tools and Industrial Robots					
Module Nr. 16-09-5020	**Credit Points** 8 CP	**Workload** 240 h	**Self study** 180 h	**Duration** 1	**Cycle offered** WiSe
Language German			**Module owner** Prof. Dr.-Ing. Eberhard Abele		

1	**Content** The course content includies machining theory, design of machine tools, machine tool components (basements, guideways, bearings, drives, controls), CAD-CAM process-chain, aspects concerning economy, construction of industrial robots.
2	**Learning objectives / Learning Outcomes** On successful completion of this module, students should be able to: • List the machining production methods and to explain their operation mode. • Describe the composition of machine tools. • Evalute and to specify the individual elements of a machine tool and therefore develop concepts of machine tools and industrial robots. • Explain the function of the elements machine bed, guideways and bearings, drives and nc-controls, measuring systems, main spindle as well as workpiece and tool handling.
3	**Recommended prerequisite for participation** None
4	**Form of examination** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Standard Grading System) Written exam 1 h 30 min
5	**Grading** Module Final Examination: • Module Examination (Technical Examination, Technical Examination, Weighting: 100 %)
6	**Usability of this module** WP Bachelor MPE Bachelor Mechatronik
7	**Grade bonus compliant to §25 (2)**
8	**References** Lecture notes are available during the course and in PTW's secretariat.
